

EXPERIMENT 26: INSERT WATERMARKING TO THE IMAGE USING OPENCV

Aim

To insert a text watermark into an image using Python and OpenCV.

Algorithm

1. Import the OpenCV library.
2. Read the input image.
3. Create a copy of the image for adding the watermark.
4. Define the watermark text, font, position, size and thickness.
5. Draw the watermark text on the overlay image.
6. Blend the overlay with the original image using `addWeighted()`.
7. Save and display the watermarked image.

Python Code

```
import cv2

# Read the input image
img = cv2.imread("input.jpg")

if img is None:
    print("Image not found")
    exit()

# Create a copy for the watermark
overlay = img.copy()

# Watermark text
text = "WATERMARK"

# Font settings
font = cv2.FONT_HERSHEY_SIMPLEX
font_scale = 2
thickness = 3
```

```
color = (255, 255, 255)

# Get text size
(text_width, text_height), baseline = cv2.getTextSize(
    text, font, font_scale, thickness
)

# Calculate center position
x = (img.shape[1] - text_width) // 2
y = (img.shape[0] + text_height) // 2

# Add watermark text
cv2.putText(
    overlay,
    text,
    (x, y),
    font,
    font_scale,
    color,
    thickness,
    cv2.LINE_AA
)

# Blend watermark with original image
alpha = 0.35
watermarked = cv2.addWeighted(
    overlay, alpha,
    img, 1 - alpha,
    0
)

# Save output
cv2.imwrite("watermarked_image.jpg", watermarked)

# Display images
cv2.imshow("Original Image", img)
cv2.imshow("Watermarked Image", watermarked)

cv2.waitKey(0)
cv2.destroyAllWindows()
```

Input

Output

Result

Thus, a text watermark was successfully inserted into the image using OpenCV.
